An abundance of textile inks to choose from. Textile pigment ink and sublimation dye ink can be loaded at the same time

Depending on the type of application and fabric, 5 different type of inks can be choose from*1. It is now possible to choose textile pigment ink (TP400) and sublimation dye ink (Sb420) at the same time*2, making possible to print with only one machine on cotton, hemp, polyester and similar textile.

Ink type	Product name	Color	Features	Applicable fabric
Sublimation dye ink	Sb420	Bl, M, Y, K, Lbl, Lm	Sublimation ink for direct printing. No transfer paper is required.	Polyester
Disperse dye ink	Dd400	C, M, Y, K, R, Gray, Violet, Pink	Inks are fixed by heating and have high durability.	Polyester, nylon, acetate, and other fibers
Textile pigment ink	TP400	C, M, Y, K, Bl, R, Lk	Simple post-printing process. No steaming, washing and drying processes are required. Inks are fixed by only heating. *3	Cotton, hemp, and other fibers
Reactive dye ink	Rc400	C, M, Y, K, Bl, R, Or, Lk	Inks produce vibrant colors, reproduce a wide gamut of colors, and have water resistance, light-fastness, and rub-fastness because of dyestuff molecule bonding with the fibers.	
Acid dye ink	Ac400	C, M, Y, K, BI, R, Or, Lk	Inks produce vivid and brilliant colors on animal fibers and synthetic protein fibers such as nylon.	Wool, leather, silk, nylon, and other fabrics

¹ Please select an ink type depending on your intended use. The ink type cannot be changed after installation. With the hybrid function two types of inks (textile pigment and sublimation dye ink) can be loaded.

Software

Specifications

TxLink3 Lite or RasterLink6 is bundled according to user's request.

*This function	can be simulated on n requires MPM2 (Mimaki rts Web upda	hances the ability to re-creat Illustrator / Photoshop with Profile Master 2). Ite function> wnload can be easily perfore	nout an actual print

Mist catch filter		SPC-0810	Filter for optional mist catch unit

Some of sample images in this brochure are simulated. Specifications, designs and dimensions stated in this brochure may be subject to change without notice (for technical improvements, etc). ◆All product and company names in this brochure are trademarks or registered of the respective companies. The printhead ejects extremely fine dots for printing, and therefore printed colors may vary after replacing the printheads. ◆When using multiple printer units, printed colors would be different slightly because there is a slight difference among those units. ◆Depending on image files used for printing, the print quality would be affected when printing in a low-resolution mode with the lowest number of passes. ◆The specifications described in this catalogue are as of Apil 2019.

For TEXTILES & APPAREL

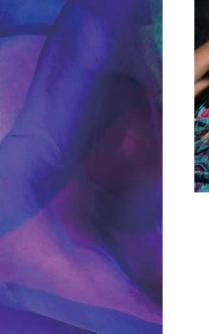

Direct Textile Inkjet Printer

TX300P-1800

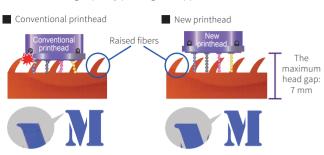

^{*2} Available from June 2017. Each textile pigment ink (TP400) and sublimation dye ink (Sb420) has 4 colors (C,M,Y,K)

^{*3} Depending on the type of printing, steaming and washing may be needed.

New printhead allows printing on various types of textile

While printing on raised fiber surface textiles, a high head gap setting is required to prevent contact between the printhead and the nap. In conventional models, such gap conditions reduce the accuracy of ink droplet placement. However, the new printhead ejects ink droplets at a high speed to maintain the straightness of the droplet direction, and accordingly accurate ink droplet placement is achieved.

This enables high-quality printing on napped textiles.

Accurate ink drop placement

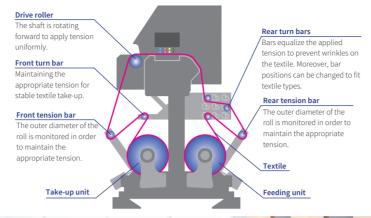

results in sharp and clear edges

Inaccurate ink drop placement leads

to blurred edges and grainy images.

Reliable textile feeding mechanism ensures stable printing

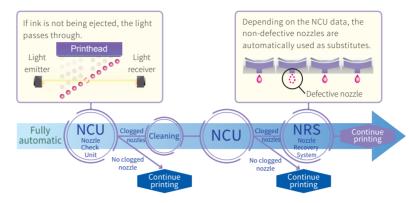

Stable textile feeding and transportation are crucial for direct textile printing. The tension applied to the textile during printing is varied according to changes in the outer diameter of the front and rear rolls. The Tx300P-1800 monitors the applied tension and uniformly applies the optimum tension using the front and rear tension bars. Thus, high-quality printing is achieved during high-speed printing or even when using a large textile roll.

Uninterrupted printing solutions

Continuous operation support pack minimizes the downtime

The Nozzle Check Unit (NCU) detects nonfunctioning nozzles and automatically cleans them. If the nozzles fail to operate after cleaning, defective nozzles are replaced by non-defective ones until a technician arrives, and printing is continued. This feature enables uninterrupted print operations and continuous productivity.

Standard features of MBIS3 and UISS deliver continuous printing for a long time.

Large two liter ink packs are installed in MBIS3¹¹ for long-time continuous printing to reduce operating cost.

As soon as one ink container is empty, UISS'2 automatically provides ink from another container without any interruption to printing.

These systems supply ink continuously to ensure unattended continuous printing.

- *1 MBIS3: Mimaki Bulk Ink System3
- *2 UISS: Uninterrupted Ink Supply System

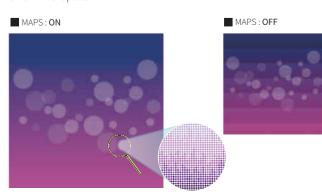

Mimaki's print technologies

Mimaki Advanced Pass System 4 (MAPS4) reduces banding

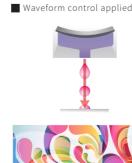

Mimaki's unique anti-banding technique MAPS4 is an advanced version of MAPS3. To prevent banding, swath boundaries are overprinted, whereas boundaries prone to banding are printed with fewer ink droplets.

Superior inkjet technology

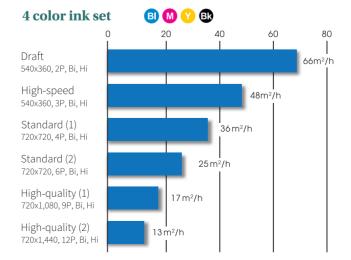

Mimaki's superior inkjet technology accurately places the ink droplets without losing their perfect circularity. This ensures that texts, lines, and edges are clearly and sharply printed.

Maximum print speed (66 m²/h) *achieves high productivity *When printing with Sb420 dye sublimation ink

The Tx300P-1800 optimizes the printing speed and quality to produce the desired print results. For this purpose, it provides a wide range of printing modes, from the draft printing mode (which operates at the maximum speed of $66 \, \text{m}^2/\text{h}$) to high-quality printing mode.

*When printing with Sb420 dye sublimation ink. DD400,TP400, Rc400 inks cannot print in draft mode
